

We are Sorry

Over the years we've heard that while you love the pocket calendar's portability, the small text was hard to read. So, we undertook what turned out to be a huge project; flipping the orientation of the pages into an expanded 'mini' book-style format, producing a two-page calendar spread. At the same we implemented another of your requests, a full ephemeris. In the process of creating this complex, compact document the Key Words that appear on each month were misplaced. This got past multiple proofers. Those keywords are a decorative holdover from when the upper calendar page contained a description of the Zodiac Sign that started each month, until we replaced it about fifteen years ago with the forecasts. But we retained the keywords as a space filler. Unfortunately, when they were transferred from the Day Planner to the 'Mini' we screwed up. Some landed on the wrong months and poor Virgo completely disappeared. They do not affect the calendar's function and in the 2022 edition the keywords will move to the 'How To' pages, to make room for a new forecasting feature. But, keywords can be helpful so here they are in their proper order.
